Bug-1 - Rack Capacity

Pallet placement accepted despite insufficient rack capacity

< Back

Add parent

BT27-1

Pallet placement accepted despite insufficient rack capacity

Key details

Description

DESCRIPTION

The system accepts a pallet placement even when the destination rack does not have sufficient remaining load capacity.

STEPS TO REPRODUCE

1. Log in as a Warehouse Operator.

2. Open the pallet placement/inventory recording function.

3. Scan or enter a valid pallet.

4. Select a rack whose remaining capacity is lower than the pallet's weight.

5. Enter/select a valid shelf location on that rack.

6. Confirm the pallet placement.

EXPECTED RESULT

The system should reject the placement and display: "Insufficient Rack Capacity."

ACTUAL RESULT

The system accepts and confirms the pallet placement even though the rack's remaining capacity is insufficient.

Environment

Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.

Backlog

Bug-2 - Barcode/RFID

Barcode scan fails to record pallet information

The screenshot displays a Jira bug report for 'BT27 board'. The bug title is 'Pallet placement accepted despite insufficient rack capacity'. The description states: 'The system accepts a pallet placement even when the destination rack does not have sufficient remaining load capacity.' The steps to reproduce are: 1. Log in as a Warehouse Operator. 2. Open the pallet placement/inventory recording function. 3. Scan or enter a valid pallet. 4. Select a rack whose remaining capacity is lower than the pallet's weight. 5. Enter/select a valid shelf location on that rack. 6. Confirm the pallet placement. The expected result is: 'The system should reject the placement and display: "Insufficient Rack Capacity."' The actual result is: 'The system accepts and confirms the pallet placement even though the rack's remaining capacity is insufficient.' The environment is 'Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.' The bug is assigned to 'Unassigned', reported by 'Simret', and has labels 'inventory', 'placement', and 'rack-capacity'. The priority is 'High'. The bug was created 1 hour ago and updated 9 minutes ago. The 'Linked work items' section shows a link to 'KBPS27-8 Validate Rack Capacity Before Pallet Placement'.

BT27-3

SKU search displays incorrect pallet location

+ ...

Key details

Description

DESCRIPTION

Searching for a valid SKU returns an incorrect or outdated pallet location.

STEPS TO REPRODUCE

1. Log in as an authorized warehouse user.

2. Open the pallet location search function.

3. Enter a valid SKU belonging to an existing pallet.

4. Submit the search.

EXPECTED RESULT

The system should display the pallet's current shelf, row and level coordinates.

ACTUAL RESULT

The system displays an incorrect or outdated 3D shelf location.

ENVIRONMENT

Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.

BT27-4

Stock movement log missing required fields

+ ...

Key details

Description

DESCRIPTION

A confirmed pallet movement is logged without all required movement information.

STEPS TO REPRODUCE

1. Log in as a Warehouse Operator.

2. Select an existing pallet.

3. Move the pallet from one shelf location to another.

4. Confirm the movement.

5. Open the stock movement log.

6. Inspect the newly created movement record.

EXPECTED RESULT

The log should contain the pallet identifier, previous location, new location, timestamp and user/device identifier.

ACTUAL RESULT

One or more required movement fields are missing from the log.

Environment

Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.

Bug-5

Rack occupancy displays incorrect pallet weight

Spaces / Bug Tracker / SBPS27

BT27 board

Summary Kanban board List Timeline Forms Docs Reports Development

Back Add parent BT27-5

Rack occupancy displays incorrect pallet weight

+ ...

Key details

Description

DESCRIPTION

The supervisor dashboard displays incorrect rack occupancy or pallet weight information.

STEPS TO REPRODUCE

1. Log in as a Logistics Supervisor.
2. Open the rack occupancy view.
3. Select a rack containing stored pallets.
4. Compare the displayed occupancy and pallet weight information with the stored inventory data.

EXPECTED RESULT

The system should display the current rack occupancy and accurate pallet weight information.

ACTUAL RESULT

The displayed occupancy or pallet weight information is incorrect.

Environment

Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.

Bug-6

SKU lookup exceeds required response time

Spaces / Bug_Tracker_BPS27

BT27 board

SummaryKanban boardListTimelineFormsDocsReportsDevelopment

< BackAdd parent / BT27-6

SKU lookup exceeds required response time

Key details

Description

DESCRIPTION

SKU lookup takes longer than the required 100 ms response time when searching across 100,000 bins.

STEPS TO REPRODUCE

1. Prepare the warehouse inventory dataset containing 100,000 bins.

2. Open the SKU lookup function.

3. Enter a valid SKU.

4. Execute the search.

5. Measure the lookup response time.

EXPECTED RESULT

The SKU lookup should complete in under 100 milliseconds.

ACTUAL RESULT

The lookup takes more than 100 milliseconds.

Dataset: 100,000 bins.

Environment

Jira Lab 2 simulated Warehouse Inventory & Pallet Location Tracker.

Bug-7

Stock movement record lost after successful transaction

< BackAdd parent / BT27-7

Stock movement record lost after successful transaction

Key details

Description

DESCRIPTION

A confirmed stock movement transaction is completed but its corresponding movement record cannot subsequently be retrieved.

STEPS TO REPRODUCE

1. Log in as an authorized warehouse user.

2. Perform a valid pallet movement.

3. Confirm the movement.

4. Verify that the system reports the transaction as successful.

5. Open the stock movement history.

6. Search for the completed movement.

EXPECTED RESULT

The confirmed movement record should be present and retrievable with all required information.

ACTUAL RESULT

The confirmed movement record is missing or cannot be retrieved.
