Warehouse Inventory & Pallet Location Tracker

Name: Simret M Kotian
SRN: PES1UG24CS456
Section: H
Problem Statement #27

Epics Creation

Prioritized Backlog

Sprints

Sprint-1

Sprint 1 was configured for one week and contained 21 story points.

Sprint-1 Active Board

Shows To-do, In-progress and Done

In-progress => Done

Sprint-2

Sprint 2 contained the remaining 19 story points.

Burndown Chart

Reflection

Q1. Did your estimations reflect the actual effort?

The estimates reasonably represented the relative effort of the stories. Simpler requirements such as pallet location search received fewer story points, while inventory recording, performance and reliability requirements received higher estimates because of their greater complexity and uncertainty.

Q2. Was your backlog well-prioritized?

Yes. Core warehouse operations such as recording pallet inventory, validating rack capacity and locating pallets were given high priority because they directly support day-to-day warehouse operations. Supporting monitoring and reliability requirements were prioritized according to their operational importance.

Q3. How did your simulated sprint align with your plan?

Sprint 1 focused on the core inventory operations, while Sprint 2 handled the remaining performance, reliability and monitoring requirements. The stories progressed from To Do to In Progress to Done according to the planned workflow.

Q4. What insights did the burndown chart give about your team's capacity?

The burndown chart provided a visual representation of the team's progress and remaining workload. It helped assess whether the planned story points were being completed at an appropriate rate and provided an indication of the team's capacity to complete the sprint commitment.
